

PEP-Mask

The PEP-Mask is a patient-led physiotherapeutic device that can be used to reduce secretions in patients with:

- Bronchiectasis
- Cystic Fibrosis
- Chronic Bronchitis
- Emphysema

PEP-Mask

- mobilises bronchial secretions (also in heavy smokers)
- eases mucous removal
- reduces chronic cough
- prevents airway narrowing and mucous retention

The PEP-Mask set consists of:

- ergonomically designed transparent face mask
- Polymer-T-connector with in-built two-way valve system with adjustable resistance and oxygen connector.
